INSTRUCTIONS FOR MEASURING WALRUS

All measurements must be made with a 1/4-inch wide flexible steel tape to the nearest one-eighth of an inch. Enter fractional figures in eighths, without reduction. Tusks **should** be removed from mounted specimens for measuring. Official measurements cannot be taken until tusks have air dried for at least 60 days after the animal was killed.

A. Greatest spread is measured between perpendiculars at a right angle to the center line of the skull. **Greatest spread does not add into the final score.**

B. Tip to Tip Spread is measured between tips of tusks. **Tip to tip spread does not add into the final score.**

C. Entire Length of Loose Tusk is measured over outer curve from a point in line with the greatest projecting edge of the base to a point in line with tip.

D-1. Circumference of Base is measured at a right angle to axis of tusk. **Do not** follow irregular edge of tusk; the line of measurement must be entirely on tusk material.

D-2-3-4. Divide length of longer tusk by four. Starting at base, mark **both** tusks at these quarters (even though the other tusk is shorter) and measure circumferences at these marks.
